Tool to extract a 5-second looping video from a non-looping input video. Also a viewer application to enable both interactive control over the level of dynamism of the output video, as well as manual editing of which regions are animated or static.

Call for papers . We are pleased to invite you to the 3D GeoInfo Conference 2018 hosted in Delft, the Netherlands! Aiming to bring together international researchers from academia, industry and government in the field of 3D geoinformation, the conference offers an interdisciplinary forum to researchers in the fields of data collection, advanced modelling approaches, data analysis and visualisation.

Structure from motion (SfM) is a photogrammetric range imaging technique for estimating three-dimensional structures from two-dimensional image sequences that may be coupled with local motion signals.

This is an incomplete list of datasets which were captured using a Kinect or similar devices. I initially began it to keep track of semantically labelled datasets, but I have now also included some camera tracking and object pose estimation datasets.

Keep it SMPL: Automatic Estimation of 3D Human Pose and Shape from a Single Image. This method first predicts 2D body joint locations and then uses another model called SMPL to create the 3D body shape mesh, which allows it to understand 3D aspects working from 2D pose estimation.

To secure uninterrupted distribution of electricity, effective monitoring and maintenance of power lines are needed. This literature review article aims to give a wide overview of the possibilities provided by modern remote sensing sensors in power line corridor surveys and to discuss the potential and limitations of different approaches.

Introduction. Diagnostic x-rays contribute to nearly 50% of the total annual collective effective dose of radiations from man-made and natural sources to the general population in western countries; computed tomography (CT) is the largest single source of this medical exposure.
