well as the relative travel time costs within a given network. Increases in highway capacity should reduce the cost of travel if relative travel times are reduced, resulting in an overall increase in

Relationships between highway capacity and induced vehicle travel

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
