EU Machinery Directive 2006/42/EC Translation Requirements - CE Mark

Machine translation (MT) is the use of a computer to translate text from one language into another. There are three main use cases for MT: getting the essence of the source content (gisting), translating content that would not be translated by humans since it is too costly and increasing efficiency while reducing costs for content that requires human post-editing.

Public translation APIs as a Web Service are great for doing machine translation within applications or casual translation for user input in many applications. With Google recently removing Google Translate API I've been looking at alternatives and so wanted to hook up to the still supported Bing Translate API. Unfortunately the signup process for the Translate API is terrible, although using the service is easy enough once signed up. In this post I discuss step by step how to sign up and ...

Setting up and using Bing Translate API Service for Machine Translation

Technical translation is a type of specialized translation involving the translation of documents produced by technical writers (owner's manuals, user guides, etc.), or more specifically, texts which relate to technological subject areas or texts which deal with the practical application of scientific and technological information.

Technical translation - Wikipedia

Google Translate is a free multilingual machine translation service developed by Google, to translate text. It offers a website interface, mobile apps for Android and iOS, and an API that helps developers build browser extensions and software applications.
