The photovoltaic (PV) industry is in rapid growth and a large supply of PV feedstock materials must be provided to maintain this growth. Since silicon is still the dominant material for the fabrication of solar cells, low-cost solar-grade silicon (SoG-Si) feedstock is demanded.

Introduction. The International Council for Harmonisation (ICH) Q3D guideline describes a risk-based approach to the control of elemental impurities in drug products.^{1, 2} The first step of the risk assessment requires the identification of known and potential sources of these impurities.
