dedicated to the development of simplified analytical methods for structural analysis of ships during collision and grounding. In many cases, it is essential that the structural performance of ships during accidents can be evaluated quickly, e.g. in a decision support system for ships in emergency situations or in a rational design procedure, where the ship performance in a large number of accident scenarios needs to be assessed. Compared to empirical methods, experimental methods and non ...

However, the analysis of ship collision events employing naval structures in reduced scale is not an ordinary ship research area. The aim of this work is to create the basis for a posterior ...

### **(PDF) Ship collision: A brief survey - ResearchGate**

This paper is part of a procedure which . analyses . ships collisions, addressing to all types of ships and damage . scenarios. The analysis of a ship-ship collision is usually . separated into two classes. These are external and internal . mechanics. Large plastic deformation of the shell plating . subject. ed to various loadings is developed. Therein is described . the work principle for upper-bound theorem and an example . for calculating crushing and tearing of a plate. Key words ...

Large-scale experiments were analysed in order to get a deeper insight into the collision dynamics. On the

basis of On the basis of the large-scale experiments a model-scale test setup is designed using the Froude's scaling law.

failure, ship collision, uncertainty analysis. ii . iii Preface This thesis is comprised of work carried out during the years 2007-2012 at the Division of Ship Design (Marine Design since 2012), Department of Shipping and Marine Technology, Chalmers University of Technology. The first part of the work was carried out as part of the project HASARD, (Holistic Assessment of Ship Survivability and Risk After Damage). This project was funded by VINNOVA, the Swedish Government Agency of Innovation ...

COLLISIONS AND GROUNDINGS – MAJOR CAUSES OF ACCIDENTS AT SEA. 49 Figs. 1 and 2.  
Common Factors in Collisions and Grounding (Source: Ziarati, 2007) The partnership is composed of major MET centres in several EU countries (Holland, Poland, Finland, Slovenia, UK and Turkey) with considerable Leonardo experience. The partners have been involved in Leonardo e-learning projects (E-GMDSS 2006-08, E-GMDSS 2008-10 and MarTEL 2007-09). The main tangible outcome is an online and novel learning and ...
